Assembly and installation instructions for the illumination and installation set for indoor and outdoor use

Dear customers,
 Thank you for purchasing the illumination and installation set for the Barlooon. Please retain the documents provided, even after installation.

This illumination and installation set are designed for use with the Barlooon and can be used both indoors and outdoors.

The illumination and installation set for indoor and outdoor use (Art. No. BZ20211220) consists of:

- 1 outdoor lighting and mounting kit with 20-meter cable (Art. No. BZ00001220)
- 1 0.75-metre stainless steel wire with end loops (Art. No. BZ00278630)
- 1 stainless steel carabiner (Art. No. BE00006375)
- 10 cable ties (Art. No. BZ00000102)
- 1 assembly instructions (Art. No. BZ00000003)

Safety notes

Damage caused by non-observance of these installation instructions will void the warranty. No liability is accepted for any consequential damage incurred.

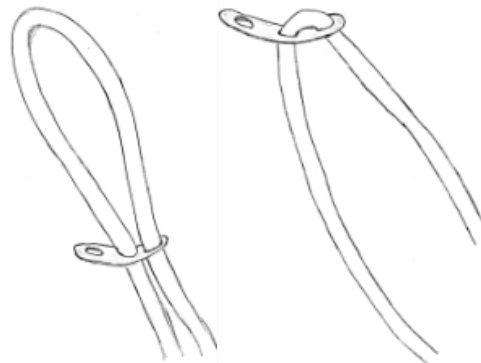

Proper use

All metal parts of the Barlooon as well as the illumination and installation set are made of stainless steel. If metal parts that can rust are used during assembly and installation, the stainless steel parts of the Barlooon may begin to rust.

Assembly and installation

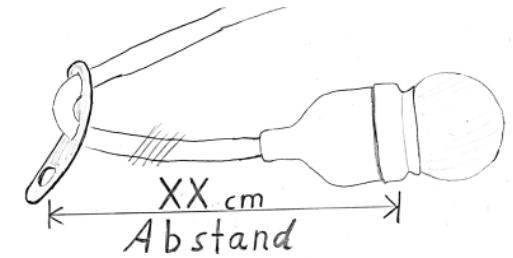

Unroll the cable and the wire.

Attach the plastic cable clip to the cable in such a way that the lamp is positioned in the middle of the Barlooon with a minimum distance of 5 cm to the outer cover of the Barlooon. This will ensure the even illumination from the Barlooon and prevent the material from becoming too warm.

Use the following approximate distances for positioning the plastic cable clip. These can vary depending on the light bulb that is used:

Barlooon size	Distance to clip
S (Ø approx. 30 cm)	approx. 18 cm
M (Ø approx. 50 cm)	approx. 29 cm
L (Ø approx. 70 cm)	approx. 40 cm

ATTENTION: The plastic cable clip is not approved for suspending the lamp and should only be used to attach the cable to the carabiner!

Please note the maximum bulb output, which applies to all lampion sizes:

- max. 1 x 25 W E27 light bulb / energy-saving or LED lamp
- NO halogen bulb

We recommend using bulbs with a somewhat subdued light, as otherwise the colours of the Barlooon will appear too bright when illuminated.

Do not use a bulb with damaged glass or cover.

Screw the bulb into the lamp socket. Ensure that you comply with the maximum lamp wattage and permitted bulb types. The sealing sleeve must seal the lamp properly! Otherwise, please insert a different bulb.

Insert the lamp with the light bulb into the lampion as illustrated in the picture. The cable should be attached to the carabiner using the plastic cable clip. Take care not to damage it when inserting it into the carabiner.

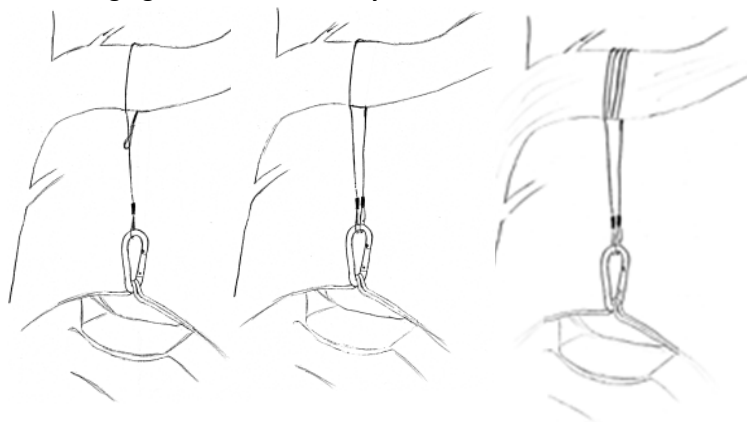

Assembly and installation as free-hanging element in a variety of locations

Hang the Barlooon in the desired location using the wire and the carabiner.

You have numerous possibilities for adjusting the length.

Now insert the cable of the illumination set into the lampion.

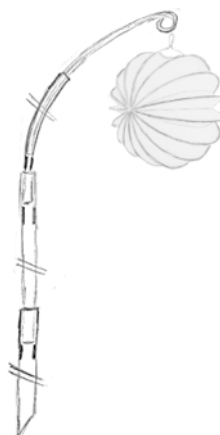

If necessary, use the cable ties provided to attach it.

Assembly and installation using the ground spike

First, assemble and position the ground spike according to the instructions. Hang the Barlooon on the eyelet at the end of the spike using the carabiner. Insert the lamp socket along with the bulb into the lampion and lead the cable downwards along the spike to the ground. Attach the cable to the spike using the cable ties provided.

Make sure the Barlooon is suspended and/or installed in a position where it is not an obstacle.

Disposal

Dear customer, please help us to avoid waste. If you should ever want to part with this article, please consider that many of its components consist of valuable raw materials that can be reused. You should therefore not dispose of the illumination and installation set in your normal household waste, but instead take the article to your collection point for electrical appliances. Thank you for your assistance.

We hope you enjoy using your Barlooon.
